Experience

everis

June 2016 - Nowadays:

I have worked on several projects, both for end customers and internal tools, in which I have used jQuery, angular, java, REST architecture, Spring, MySQL, MongoDB and git among others. Also the whole Atlassian suite for agile management and methodologies. During this time I have managed to progress from junior to mentor while considered an expert in my field and a reference in the center of Alicante, with more than a thousand employees.

Volunteering

everis

June 2016 - Nowadays:

I have been an altruistic member of the organization in Alicante of several events such as Women Tech Makers or Hash Code, both planned by Google or Space Apps Challenge convoked by NASA. At the same time I work on side projects, personal and with other colleagues, exploring other technologies such as Amazon Web Services or Docker.

Qubic

2012 - 2017:

Senior member of this student association dedicated to organize workshops and technical expositions, organize events in spanish universities and build engineering projects.

Volunteer in Foro USAES several editions

2013 - 2015:

Organizing logistic tasks of this event celebrated in some spanish universities such as: Albacete, Leon, Valencia and Castellon. It consists of a whole day with speeches from students with important scholarships in USA.

Limpiosity Robot

October - December 2013:

Electronic design, build and programming of an autonomous robotic vacuum cleaner made of recycled parts in a group of three students.

Participante Yuzz

October 2012 - May 2013:

Elected in a process selection to compete in a national entrepreneurs contest designing a business project about robotic toys for learning purposes.
