I am a developer with over 9 years of experience, initially specializing in front-end development, which remains my passion. To expand my skill set and become more versatile, I have evolved into a full-stack developer, actively contributing to decision-making and solution-seeking throughout the entire development process. I pride myself on being autonomous, a proactive problem-solver, and a collaborative team player. Throughout my career, I've had the privilege of working alongside talented individuals, which has allowed me to grow both professionally and through personal side projects.

EXPERIENCE

Frontend engineer at Pleo

October 2025 - Present

Fullstack developer at Lansweeper

July 2019 - September 2025

I was part of the team in charge of creating an IT assets management SaaS solution. This software was developed with React on the front; node microservices on the backends; graphQL, gRPC and kafka for communication and kubernetes for infraestructure. All of this stick together with CI/CD on github and tests. In this position I found new challenges everyday like focusing on performance and scalability when coding, creating POCs quickly and working with distributed teams across the globe.

Fullstack developer at Everis

July 2016 - July 2019

I have worked on several projects, both for external clients and internal tools, in which I have used jQuery, Angular, Java, Spring, REST architectures, MySQL, MongoDB, git and Atlassian suite among others.

- I promoted in less than a year while working for a national insurance company.
- I was in constant communication with the client and adapting our solution to their needs.
- I managed several services and tools used across the whole company all around the world, I supported users, solved tickets and developed new features.
- I grew up as a mentor helping new colleagues and giving talks and workshops to the rest of the employees in the center about rising technologies.

VOLUNTEERING

Volunteering at Everis

July 2016 - July 2019

I have been an altruistic member of the organization in Alicante of several events such as Women Tech Makers or Hash Code, both planned by Google or Space Apps Challenge organized by NASA. At the same time I work on side projects, personal and with other colleagues, exploring other technologies such as Amazon Web Services or Docker.

Qubic

2012 - 2017

Senior member of this student association dedicated to organizing workshops and technical expositions, events in Spanish universities and building engineering projects.
